PROFILE SUMMARY

Results-driven Python Django and React Developer in BROTOTYPE with a proven track record of delivering over 30+ real-world projects independently. A self-taught full-stack developer with deep expertise in building web applications from scratch — from backend logic with Django to dynamic frontends using React.js. Skilled in API development, authentication (JWT), database design (PostgreSQL), and responsive UI design. Adept at managing the entire development lifecycle, including planning, coding, testing, deployment, and optimization. Strong foundation in object-oriented programming, clean code practices, and problem-solving.

TECHNICAL SKILLS

Programming Languages	: Python, JavaScript (ES6+)
Framework/Libraries	: Django, Django REST Framework, React.js
State Managements	: Redux Toolkit
Backend	: Django, Django REST Framework
Databases	: PostgreSQL, SQLite
Dev Tools	: Git, GitHub, VS Code
Deployment	: AWS (Amazon Web Services)
Expertise	: OOPS, Debugging, RESTful API, Data Structures and Algorithms

PROJECTS

AI-MENTOR | AI Mentor | Django, React, Vapi AI, Gemini, JWT Auth | Voice-Enabled Learning | AI-Based Compiler Playground

AI-MENTOR is a **smart e-learning platform** that delivers an **AI-powered teaching experience through voice**. Designed to help developers learn effectively, users can interact with AI mentors using voice commands powered by Vapi AI, and receive real-time spoken responses tailored to their learning level. The platform offers an interactive code playground powered by the **Monaco editor**, where users can solve programming challenges or practice freely with instant feedback and error detection. Practical coding questions are dynamically generated using **Google Gemini**, encouraging active problem-solving. A secure JWT-based authentication system handles login, with access tokens stored in cookies and refresh tokens in localStorage for a smooth and persistent user experience.

- **Built with Django and React**, featuring **JWT-based authentication** with tokens stored securely in **cookies and localStorage**.
- **Voice-interactive learning** using **Vapi AI**, allowing users to speak with AI mentors and get real-time voice responses.
- **Dynamic practical questions** generated through **Google Gemini**, promoting active problem-solving.
- Integrated a powerful **Monaco-based code editor** for live coding, debugging, and syntax-aware feedback.
- **Mistake detection system** provides instant feedback and suggestions during code practice.
- **Playground mode** for open coding practice, allowing users to experiment without predefined questions.

TenZo | PYTHON, DJANGO, POSTGRESQL, MVT, RAZORPAY

TenZo is a full-featured **eCommerce platform** built for selling clothing with a focus on smooth user experience and secure transactions.

- **Product management system** with image upload, pricing, category-wise filtering, and inventory tracking.
- **Razorpay payment integration** for secure and seamless checkout experience.
- **Admin-only dashboard** for managing products, orders, users, and offer settings.
- User-side **"Become a Customer"** form for B2B clients with file uploads and product requirements.
- **Responsive design** optimized for mobile and desktop devices.

MINI PROJECTS

Netflix Clone | React, Firebase, TMDB API

- Integrated **TMDB API** for fetching dynamic content like trending and top-rated movies.
- Implemented **Firebase Authentication** for user login and secure access.

OLX Clone | React, Django, REST API

A fully functional OLX-like platform with user authentication, product listings, and category-based filtering.

Completed **30+ diverse projects** and **showcasing a range of skills from beginner to advanced level**.
